

Plug. Power. Prosper.

In the last five years, Energy has become a major concern for industrial SMEs: prices soaring, hourly volatility increasing and regulatory pressure requiring industrials to decarbonize and adopt renewable energy solutions.

The Challenge

Many factories have installed solar panels, but 1/3 of the energy produced on-site is lost due to production-consumption mismatch. Thus, only a small portion of industrials' total electricity needs are covered with their solar panels. While energy storage appears to be an obvious solution, existing solutions are too complex, perceived as unreliable, and expensive for SMEs to implement effectively.

Our Solution

Solea is a turnkey solution for **easy, safe & free storage**. We provide a no hassle, no risk, no cost experience for industrials looking to implement storage solutions by handling everything from project design & installation to live AI optimisation, monitoring & maintenance.

By leveraging existing infrastructure, we are able to cut project development time by half, and are well positioned to scale Europe's first decentralised battery network.

Our Impact

**Unlock Energy
Savings**

**Increase Energy
Independence**

**Drive Scope 2
Decarbonation**
